

It has now been over 30 years since the Acquired Immunodeficiency Syndrome (AIDS) was first described. Initially it was a mysterious new disease taking a high toll on young men, women and children without any identifiable cause. Although most clinical investigators felt that AIDS had a viral cause, it was not until 1984, three

but for those who were infected, who saw their health deteriorating and facing death, it seemed an eternity.

Now we can diagnose HIV infection early in the course of the disease, have over

In FY10, the PMTCT program operated at HEAL Africa Hospital in the urban center of Goma and 14 rural clinics.

Funds were provided in FY10 to support education and training, implementation, indirect expenses and salary support for two physicians and one nurse.

During this time, Dr. William Bonane pursued and received his Masters in Public Health degree. He graduated with honors, Se. s timed to HEAL Africa

In FY10, a generous individual supporter donated the following in-kind gifts:

- 1000 post-exposure prophylaxis (PEP) kits
